University of People

Bachelor's degree of Computer Science

2023 - present

Microverse

Remote Full Stack Web Development Program, Full Time

2023 March - 2023 Sep

PROFILE

"Enthusiastic junior full-stack developer with one year of experience, specializing in front-end development. Known for a keen eye for user-centric design and a drive to create engaging web interfaces. Eager to further develop skills and collaborate on innovative projects within dynamic teams."

WORK EXPERIENCE

E-commerce Website:

- Develop a fully functional e-commerce website where users can browse products, add them to their cart, and complete the checkout process.
- Implement features such as user authentication and authorization, allowing users to create accounts, view order history, and manage their profiles.
- Design the website with a focus on usability and conversion optimization, incorporating best practices for e-commerce UI/UX design.
- Use modern front-end technologies such as React.js or Vue.js to build dynamic and responsive user interfaces. Integrate with backend services or APIs for product data, user authentication, and payment processing.
- Enhance the website with features like product filtering, search functionality, and personalized recommendations to improve the user experience and drive sales..

Interactive Data Visualization Dashboard

- Create an interactive data visualization dashboard that allows users to explore and analyze complex datasets.
- Use libraries such as D3.js or Chart.js to visualize data in various formats such as charts, graphs, maps, and tables.
- Implement interactive features such as filtering, sorting, and drilling down into specific data subsets to provide users with insights and actionable information.
- Design the dashboard with a clean and intuitive interface, making it easy for users to navigate and understand the data.
- Integrate with backend services or APIs to fetch and update data dynamically, allowing the dashboard to reflect real-time or near-real-time data changes.
- Customize the dashboard based on specific use cases or industries, such as finance, healthcare, or marketing, to demonstrate your ability to tailor solutions to specific requirements.
-
